**Dependable Dual Electrical Systems**

**New!**

**Combination Power Converter and 115V A.C. Load Center**

**Designed for Small Campers from**

**Progressive Dynamics**

**Features:**
- Designed to be flush mounted in acept wall or cupbord to save space.
- Easy to install.
- 12 Volt output fuse or circuit breaker provided to protect against overload.
- The battery transformer switch allows the R.V. electrical system to operate from the converter or car battery. The switch "off" position removes all power when towing.
- 115 Volt converter outlet provided.
- 15 Amp, 115 Volt circuit breakers provided to prevent overload of 115 Volt appliances operated through unit.
- U.L. Listed - C.S.A. approved.
- Provides convenient location for all camper fuse and circuit breakers.

This new power converter is easily installed flush into tent cupbord closet wall or cupbord to save space. Because it converts 115 Volt power to 12 Volt direct current it eliminates the need to connect to car battery to operate 12 Volt lights, water pumps, etc., and makes it possible for campers to utilize 115 Volt power when available, thus avoiding excessive drain on the car battery. A 115 Volt convenience outlet on the converter permits 115 Volt appliances to be connected to the converter eliminating the need for a separate 115 Volt A.C. outlet. The unit is equipped with an Amp, 115 Volt circuit breakers and 12 Volt fuse or circuit breaker to prevent overload damage.

**Wiring Diagram**

(Canadian variants are "Battery" in "Good Condition")

**Installation**

For flush mounting a 4" x 11/2" cut out is required. MINIMUM CLEAR AREAS REQUIRED: UNINDICATED.

**Why The Trend To Converters?**

- At last, electrical power is available in the car and home for on-the-road and at home entertainment.
- A modern electrical system, where 115 Volt AC circuit is available, can be used with dry cell batteries and water pumps and fans may be operated directly with the power converter and converted battery system.
- In the event of a power failure when the inverter switch is set to "Converter" all usage of AC will be lost.
